Telephone Reimbursement
Final Test Case Report

Environment: IPAS staging | Test date: 10 November 2026 | Account: ena.ja

Report item	Result
Overall status	FAIL - duplicate insertion defect reproduced
Form and field validation	PASS
Preview field recheck	PASS
Submission workflow	PASS, but duplicate insertion occurred
Maximum submission limit	5 of 5 test submissions used

1. Scope and objective

The Telephone Reimbursement claim was tested end-to-end through Establishment & Admin -> Individual -> Claims -> Telephone Reimbursement. The testing covered data entry, required-field validation, Preview recheck, supporting PDF upload, agreement validation, submission, history/dashboard verification, and API-call behavior.

2. Test account and form details

Item	Observed value
User	ena.ja
Employee ID	0457
Full name	EnA Jr. Assisant
Department	Establishment and Administration
Designation	Junior Assistant
Monthly ceiling	1100.00
Form	Telephone Reimbursement

3. Validated claim data

Field	Value
Date of bill	10/11/2026
Connection type	Telephone
Telephone number	9123456789
Amount claimed	200.00
Calculated total	200.00
Supporting document	telephone-test.pdf (PDF)
Document title	November validation claim
Agreement	Checked
Remarks	Validated before submission

4. Test case results

Test case	Result	Evidence / observation
Login and menu navigation	PASS	Account authenticated and form opened.
Employee details loaded	PASS	ID, name, department, designation and ceiling displayed.
Required-field validation	PASS	Missing title, attachment and agreement were rejected.
Date validation	PASS	Date selected through the date picker and retained.
Connection type validation	PASS	Telephone selected and retained.
Telephone number validation	PASS	9123456789 retained.
Amount validation and calculation	PASS	Amount 200.00; total calculated as 200.00.
Supporting document validation	PASS	PDF uploaded and displayed.
Preview field recheck	PASS	All populated values rechecked before Submit.
Submit confirmation	PASS	Confirmation dialog displayed before final submission.
Submission	PASS	Receipt 173947/2026/IMS generated.
History/dashboard verification	FAIL	Duplicate entries and multiple receipts observed.
Preview API behavior	FAIL	Preview triggered an insert API call.
Submit API behavior	FAIL	Submit run showed two insert responses.

5. Duplicate-entry and API evidence

The duplicate-entry defect was reproduced across the controlled runs. The same claim was accepted more than once, and the dashboard displayed back-to-back Telephone Reimbursement submissions.

Receipt	Time	Observation
173944/2026/IMS	14:48	First completed claim.
173945/2026/IMS	14:52	Same claim submitted again; duplicate created.
173947/2026/IMS	14:59	New validation claim submitted successfully.

API evidence captured

Action	Observed requests
Preview	POST /ERPSystemAPI/api/TelephoneReimbursement/InsertTeleReimbursementDetails; GET /ERPSystemAPI/api/Common/getCommonbase64FromInstanceId?...urlKey=TelephoneReimbusrement
Submit	Two successful responses for POST /ERPSystemAPI/api/TelephoneReimbursement/InsertTeleReimbursementDetails in the final run, plus the PDF/base64 GET.

6. Submission-limit accounting

Submission	Use
1	Initial end-to-end claim; receipt 173944/2026/IMS
2	Duplicate reproduction; receipt 173945/2026/IMS
3	Preview duplicate investigation (insert side effect observed)
4	New validation claim; receipt 173947/2026/IMS
5	Reserved/consumed by the final Submit request behavior; no further submissions made

7. Final conclusion and recommendation

Final result: FAIL. Field-level validation and the user workflow operate correctly, but the defect remains in the persistence/API layer. Preview must be read-only and must not call InsertTeleReimbursementDetails. Submit must execute exactly one insert operation per user-confirmed claim, with duplicate-request protection. After the fix, rerun Preview and Submit with request counting and verify that history contains exactly one row and one receipt per claim.

Prepared from the browser execution evidence captured on 10 November 2026.
